Business Performance Analysis & Strategic Recommendations

Business Intelligence Case Study

Data Modeling · KPI Framework · Sustainability Analytics · Power BI

Key Insights at a Glance

1

+7.83%

REVENUE GROWTH

Total revenue reached \$663.95K, but growth is highly volatile month-to-month — from +43.7% to -66.5% — signaling a seasonality problem, not a demand problem.

2

23.29%

LOYALTY RATE

Recurring guests generate less average revenue (\$824) than one-time guests (\$861). The loyalty program isn't yet converting into higher lifetime value.

3

52% / 48%

ACCOMMODATION VS. ACTIVITY

Reservations are nearly balanced across offer types, but Accommodation earns \$880 per booking versus \$795 for Activities — a clear margin gap.

4

67.5%

SUSTAINABILITY INDEX

Just short of the 70% target. Organic-agriculture experiences rate highest (3.2/5), pointing to a practice worth scaling platform-wide.

Six Metrics Anchor the Business Case

EcoTrips Is Well Positioned to Grow Through Data-Driven Decisions

COMPANY OVERVIEW

EcoTrips is a sustainable-tourism platform connecting travelers with eco-certified accommodations and conservation-linked activities. The platform tracks reservations, revenue, guest loyalty, and the environmental impact of every offer.

BUSINESS OBJECTIVE

Turn two years of reservation data into a decision-ready view of where revenue, loyalty, and sustainability performance are heading.

ANALYTICAL GOALS

- 1 Unify the data**
Model Accommodation and Activity reservations into a single supertype/subtype schema.
- 2 Define the KPIs**
Establish revenue, loyalty, and sustainability metrics leadership can track monthly.
- 3 Surface the story**
Translate dashboards into an executive narrative — not just charts.

Our Analysis Focused on Revenue, Customer Behavior, and Sustainability

Data Model

A supertype/subtype schema unifies Accommodation and Activity reservations under one fact table, with shared guest, offer, and date dimensions.

KPI Framework

Revenue, average revenue per reservation, loyalty rate, and a sustainability index were defined once and reused across every dashboard page.

Methodology

SQL modeling of raw reservations → star-schema semantic layer → Power BI dashboards built for two audiences: Strategic Planning and Customer Experience.

Revenue Growth Indicates Strong Market Adoption — But Not Yet Stable

\$663.95K

TOTAL REVENUE

+7.83%

LATEST MONTHLY GROWTH

-66.5% to +43.7%

GROWTH SWING RANGE

Revenue climbed from \$43K to a \$62K peak twice in the period, but single-month swings as wide as 110 points point to seasonal demand rather than steady, compounding growth.

Customer Retention Represents the Largest Growth Opportunity

23.29%

OVERALL LOYALTY RATE

Recurring guests spend \$824 on average — less than the \$861 one-time guests spend. Retention is happening, but it isn't yet translating into higher lifetime value.

High-Performing Experiences Drive Most Business Results

Offer Type	Reservations	Avg. Revenue / Res.	Total Revenue
Accommodation	411	\$880.19	\$361.8K
Activity	380	\$795.24	\$302.2K
Total	791	\$839.38	\$663.95K

MARGIN GAP

+\$84.95

Accommodation earns \$84.95 more per reservation than Activities — nearly identical volume, unequal margin.

WHAT THIS MEANS

Accommodation and Activities are almost evenly split in bookings, so demand is not the constraint. The gap sits entirely in monetization — pricing, upsells, and packaging of Activities have room to close nearly \$85 per reservation against Accommodation's benchmark.

Sustainability Has Become a Competitive Advantage

Organic agriculture leads every sustainable practice at 3.2/5, while monthly review scores hover in a tight 2.65–3.14 band — consistent quality, with room to close the 2.5-point gap to the 70% target.

Data Suggests Four Strategic Actions to Accelerate Growth

Finding	Recommendation	Expected Impact
Recurring guests spend less (\$824) than one-time guests (\$861).	Launch a tiered loyalty program with rewards that scale with repeat spend.	Higher revenue per recurring guest
Monthly revenue swings from -66.5% to +43.7%.	Introduce off-season packages and dynamic pricing to smooth demand.	More predictable monthly revenue
Activities earn \$84.95 less per reservation than Accommodation.	Redesign Activity pricing and bundling to close the monetization gap.	Narrower cross-category margin gap
Sustainability index sits at 67.5%, 2.5 pts below the 70% target.	Scale organic-agriculture practices — the top-rated experience — platform-wide.	Sustainability index above target

A Phased Implementation Plan Will Maximize Business Impact

0–3 Months

- Design tiered loyalty rewards
- Audit Activity pricing & bundles
- Publish sustainability practice benchmarks

3–6 Months

- Launch loyalty program & track spend uplift
- Pilot dynamic pricing for off-season months
- Scale organic-agriculture experiences to new regions

6–12 Months

- Expand loyalty tiers based on results
- Roll out demand-smoothing pricing platform-wide
- Reassess sustainability index against 70%+ target

Turning Data into Sustainable Growth

1

Data-driven decision making

A unified reservation model and a shared KPI framework now let EcoTrips track revenue, loyalty, and sustainability from one source of truth.

2

Improve customer retention

Recurring guests are loyal but underspend — closing that gap is the single largest revenue lever identified in this analysis.

3

Promote top-performing experiences

Organic-agriculture activities and Accommodation offers set the benchmark; scaling what already works is the fastest path to the sustainability target.

APPENDIX

Live Dashboard Views

Power BI — Strategic Planning & Sustainability Impact pages, built and formatted end-to-end in the EcoTrips brand theme.

Executive Strategic Planning Dashboard

Revenue, growth, and loyalty KPIs for leadership review.

Customer Experience Team Dashboard

Sustainability index, review trends, and offer-level performance.
